------------------------------------	-----------

<i>Introduction</i>	<i>xv</i>
---------------------	-----------

Part I General introduction

1	Overview of metals and applications	3
	T. HANAWA, Tokyo Medical and Dental University, Japan	
1.1	Introduction	3
1.2	General properties required for metals in medical devices	4
1.3	Stainless steels	8
1.4	Cobalt-chromium-based alloys	12
1.5	Titanium-based alloys	13
1.6	Shape memory and superelastic alloys	18
1.7	Noble metals and alloys	20
1.8	Other metals	21
1.9	References	22
2	Material selection	25
	Y. OKAZAKI, National Institute of Advanced Industrial Science and Technology, Japan	
2.1	Introduction	25
2.2	Standardised implantable metals	25
2.3	Biocompatibility of various metals	28
2.4	Highly biocompatible $\alpha+\beta$ -type Ti alloy	29
2.5	Stability of passive film formed on metals	37
2.6	Metal ion release	40
2.7	Evaluation of biological properties	46
2.8	Fatigue assessment	51
2.9	Orthopaedic implant device failure: Analysis of adverse clinical cases	53

2.10	Performance evaluation for orthopaedic devices	55
2.11	Future trends	60
2.12	References	62
 Part II Mechanical behaviour, degradation and testing of metals for biomedical devices		
3	Mechanical properties of metallic biomaterials T. NAKANO, Osaka University, Japan	71
3.1	Introduction	71
3.2	Requirements for mechanical functions <i>in vivo</i>	72
3.3	Methods for strengthening metallic biomaterials	85
3.4	Phase rule and phase diagram	87
3.5	Deformation and recovery, recrystallisation, and grain ripening	91
3.6	Microstructure and related mechanical properties in typical metallic biomaterials	91
3.7	Development of metallic biomaterials based on biological bone tissues	93
3.8	Summary	96
3.9	References	96
4	Corrosion of metallic biomaterials S. HIROMOTO, National Institute for Materials Science, Japan	99
4.1	Importance of corrosion	99
4.2	Principles of corrosion	100
4.3	Corrosion morphology	105
4.4	Evaluation methods of corrosion behaviour	108
4.5	Biological environments	115
4.6	References	119
5	Fatigue failure of metallic biomaterials M. NIINOMI, Tohoku University, Japan	122
5.1	Introduction	122
5.2	Fatigue strength	123
5.3	Fatigue crack propagation	141
5.4	Fretting fatigue strength in air and <i>in vitro</i>	147
5.5	Fatigue strength of wire	150
5.6	Summary	153
5.7	References	153

6	Mechanical testing of metallic biomaterials N. MARUYAMA, National Institute for Materials Science, Japan	157
6.1	Fracture of metal implants and test methods	157
6.2	Living body environment	159
6.3	Tensile strength of metallic materials	160
6.4	Fatigue and fretting fatigue of metallic materials	161
6.5	Effect of corrosion on fatigue and fretting fatigue	166
6.6	Corrosion fatigue and fretting corrosion fatigue tests in a simulated body environment	166
6.7	Results of fatigue and fretting fatigue tests on metallic biomaterials	170
6.8	New fatigue tests for metallic biomaterials	175
6.9	Acknowledgements	176
6.10	References	177
7	Tribology and tribo-corrosion testing and analysis of metallic biomaterials Y. YAN, University of Leeds, UK	178
7.1	Introduction to tribology-related testing	178
7.2	General testing methods for tribological properties	179
7.3	Tribo-corrosion testing	184
7.4	Surface analysis for tribology and tribo-corrosion properties	192
7.5	Future trends	198
7.6	References	199
8	Biocompatibility and fabrication of <i>in situ</i> bioceramic coating/titanium alloy biocomposites C. CUI, Hebei University of Technology, China	202
8.1	Introduction	202
8.2	Titanium and its alloys	203
8.3	Biomedical applications and development of Ti and its alloys	204
8.4	Biocompatibility and fabrication of <i>in situ</i> synthesized bioceramic coatings on Ti alloys	211
8.5	Acknowledgements	230
8.6	References	230

Part III Processing metals for biomedical applications

9	Forging of metals and alloys for biomedical applications M. CHANDRASEKARAN, Bio-scaffold International Pte Ltd, Singapore	235
9.1	Introduction	235

viii	Contents	
9.2	Fundamentals of forging and typical forging process applied to metals and alloys for biomedical applications	236
9.3	Properties for forgeability	239
9.4	Microstructural development and its consequences on properties	240
9.5	Forging of metals and alloys for biomedical applications	241
9.6	Die materials and die design for forging	246
9.7	Powder metallurgy forging of metals and alloys for biomedical applications	247
9.8	Summary	248
9.9	Sources of further information and advice	248
10	Surface treatment R. THULL, University of Wuerzburg, Germany	251
10.1	Introduction	251
10.2	Surface structuring	252
10.3	Physical modifications	254
10.4	Strength of modifications	256
10.5	Interface modulation and biocompatibility	257
10.6	Future developments and optimizations	257
10.7	Summary	258
10.8	Sources of further information and advice	258
10.9	References	259
11	Coatings for metallic biomaterials T. KASUGA, Nagoya Institute of Technology, Japan	260
11.1	Introduction	260
11.2	Calcium phosphate ceramic coatings	261
11.3	Calcium phosphate glass-ceramic coatings	267
11.4	Bioactive surface prepared by chemical treatments	272
11.5	Summary	278
11.6	References	279
12	Biocompatible polymer assembly on metal surfaces K. ISHIHARA and J. CHOI, The University of Tokyo, Japan	283
12.1	Introduction	283
12.2	Phospholipid polymers providing biocompatible surfaces on metals	284
12.3	Surface grafting of 2-methacryloyloxyethyl phosphorylcholine (MPC) polymer on titanium alloy	288
12.4	MPC polymer assembly on Ti alloy	291
12.5	Future trends	298

12.6	Summary	299
12.7	Acknowledgement	300
12.8	References	300
13	Sterilisation and cleaning of metallic biomaterials S. LEROUGE, Ecole de Technologie Supérieure, Canada	303
13.1	Introduction	303
13.2	Concepts and definitions	304
13.3	Principal sterilisation methods for biomaterials; advantages and limitations	307
13.4	Alternative sterilisation methods	316
13.5	New challenges for sterilisation	319
13.6	Cleaning	321
13.7	Standards and other sources of further information	322
13.8	Summary	322
13.9	References	323

Part IV Specific applications of metals for biomedical devices

14	Orthopaedic applications of metallic biomaterials T. MATSUSHITA, Chubu University, Japan	329
14.1	Introduction	329
14.2	Total hip replacement	331
14.3	Total knee replacement	341
14.4	Miscellaneous joint replacement	345
14.5	Implants for bone fractures	347
14.6	Failure of orthopaedic implants	349
14.7	Summary	351
14.8	References	351
15	New-generation metallic biomaterials T. NARUSHIMA, Tohoku University, Japan	355
15.1	Introduction	355
15.2	Brief overview of traditional metallic biomaterials	356
15.3	Newer alloys as metallic biomaterials	361
15.4	Novel processing technologies for metallic biomaterials	366
15.5	Other metallic biomaterials	371
15.6	Future trends	372
15.7	Sources of further information and advice	374
15.8	References	374

x	Contents	
16	Degradable metallic biomaterials for cardiovascular applications	379
	H. HERMAWAN, D. DUBÉ and D. MANTOVANI, Laval University, Canada	
16.1	Introduction	379
16.2	Clinical needs for using degradable metallic biomaterials	381
16.3	Studies on degradable metallic biomaterials for cardiovascular applications	382
16.4	Lessons from the first ten years of investigation in degradable metallic biomaterials	395
16.5	References	400
	<i>Index</i>	405
